ALIGNMENTS

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal. The present invention describes a recombinant agfA gene (1) where a segment, of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epicope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEFT/TAF) nucleation depended assembly system of strains of Salmonella, Bscherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native Salmonejla; agfA; chromosomal gene replacement; fimbrin; epitope; AgfA::Pṛ3#6 amino acid sequence SEQ ID NO:22. Kay WW; Disclosure; Page 137; 139pp; English. vaccine; immune response; immunogen. Collison SK, AAB36351 standard, protein, 151 AA. 05-APR-2000; 2000WO-CA000356. (first entry) Salmonella enteritidis. ```
copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant Agfa protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant Agfa protein which is useful for the expression of recombinant Agfa protein which is useful for eliciting an immune response in an animal. In a finbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogens(city and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response immunogens, in inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                 0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SDARKSETTITQSGYGNGADVGQGADNYDQLVTRVVTHEMAHADQWNAKNSDITVGQYGG 120

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epiteppe or antigen. Also described are:

(I) use of thin aggregative finbriae (SEP17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Encombinations of Salmonella, Escherichia coli and AgfA, CoBA and AgfA-homologue finbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a replacement segment or segments of foreign amino acid polymer comprising a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence esponse in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to coliciting an immune response in an animal. In a fimbrial presentation system the carrier fimbrial submit protein possesses both the immunogens, which may be important for directing an immune response immunogens, which may be important for directing an immune response against the inserted epitops, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention

CC assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and contract assembly system of strains of Salmonella, Escherichia coli and Salmonella and Salmonella, Escherichia coli and directing recombination scheroly; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene comprising separating an eminon acid polymer comprising separating an amino acid polymer comprising a recombinant of comprising separating an amino acid polymer comprising a recombinant of protein containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or consequity for the expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for useful for the expression of recombinant In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunosencity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial submit proteins are usually strong immunosencity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial submit protein are usually strong immunosensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SDARKSETTITOSGYGNGADVGQGADNYDQLVTRVVTHEMAHADQWNAKNSDITVGQYGG 120

                                                                                                   The present sequence represents agfA encoded by the full agfA gene derived from Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms. The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA (sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SERIY/TAF) mucleation depended assembly system of strains of Salmonella. Escherichia coli and Enchartaceae for the production of fimbriae comprising recombinant of AffA, CspA and AgfA-homologue fimbrin subunits, respectively, (2) directing recombination of a recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising are combinant or segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or comprising expertations and the host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or dilutent. (I) is useful for the expression of recombinant AgfA protein which is useful for system the heterologous antigens are presented in high numbers (up to comprisity and adhesion properties relevant for an efficient live contraction the arrange of the properties relevant for an efficient live contraction the arrangement of the more contraction in the contraction that are presented in high numbers (up to continue the contract of the contraction protein protein protein live contraction the contraction the contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction and contraction contraction and contraction and contraction contraction and contraction contraction and contraction contraction con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        --YDQLVTRVVTHEMAHADQ 105
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATYDQLVTRVVTHEMAHA-- 118

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA comparison that the modes a foreign epicope or antigen. Also described are: (1) use of thin aggregative finbriae (SEFIT/TAP) nucleation depended assembly system of strains of Salmonella, Escherichia coli and comparison of strains of finbriae comprising recombinant of Enterophysical and AgfA-homologue finbriae (SEFIT/TAP) nucleation depended composition of a recombination of a recombination of a recombinant gene into the chromosome of the homologue species, replacing the native comprising separating an amino acid polymer comprising a recombinant gene of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enteropacteriaceae host cell, from the host cell and introducing the contribution with a carrier or diluent. (1) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the hererologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogens, which may be important for directing an immune response imanungens, which may be important for directing an immune response in against the inserted epitope, and hybrid fimbriae are easy and inexted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                          Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                 Kay WW;

The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbries (SEPI)/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enteropacteriacae for the production of fimbriae comprising recombinant of Enteropacteriacae for the production of fimbriae comprising recombinant of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombinant gene comprising species; (3) directing recombination of a recombinant gene comprising separating an amino acid polywer comprising separating an amino acid polywer comprising a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino said sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polywer into the animal in conjunction with a carrier or diluent. (1) is useful for the expression of recombinant AgfA protein which the theorem of system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to vaccine, the carrier fimbrial submit protein sare usually strong immunogens, which may be important for directing an immune response in anymonent. The present sequence is given in consideration of the present invention received in sequence is given in
                                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ---NYDQLVTRVVT

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epicope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEP1/7TAP) mucleation depended assembly system of strains of Salmonella, Escherichia coli and CE DIRECTARCAGE of the Production of fimbriae comprising recombinant of a recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal. COPY of that gene; and (4) eliciting an immune response in an animal comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, Coli or Enterobacteriaceae host cell, from the host cell and inroducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for useful for the expression of recombinant AgfA protein which is useful for system the heterologous artigens are presented in high numbers (up to System the heterologous artigens are presented in high numbers (munogenicity and adhesion properties relevant for an efficient live vector is munogens, which may be important for directing an immune response in an animal processes of communication in the processes of against the inserted epitope, and hybrid finabriae are usually strong immunogens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (I) use of thin aggregative fimbriae (SERIT/TAFF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant gene into the chromosome of the homologous species; (3) directing recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal. Comprising separating a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the coll sequence host cell, from the host cell and introducing the copy setul for the expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/Cell), the hybrid finbrian protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit protein possesses both the immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The presente sequence is given in SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNÅTIDQWNAKNSDITVGQYGG 120 Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal. 61 SDARKSETTITQSGYGNGADVGQGADNYDQLVTRVVTHEMAHADQWNAKNSDITVGQYGG Salmonella, agfA, chromosomal gene replacement, fimbrin, epitope, vaccine, immune response, immunogen.                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign peltope or antigen. Also described are: (1) use of thin aggregative fimbriae (SBF17/TAF) nucleation depended assembly system of strains of Salmonella Escherichia coli and farerobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologues species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species; replacing the native copy of that gene; and (4) eliciting an immune response in an animal, protein constaining a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or
                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

Also described are:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine; the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 SDARKSETTITQSGYGNGADVGQGADNYDQLVTRVVTHEMAHADQWNAKNSDITVGQYGG

assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologue species, replacing the chromosome of the homologue species, replacing the native comprising separating an amino acid polymer comprising recombinant gale comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment of segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequence cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or dilutent. (I) is useful for the expression of recombinant AgfA protein which is useful for useful for the expression of recombinant AgfA protein mumbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the vaccine, the carrier fimbrial subunit protein possesses both the carrier fimbrial subunit protein are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and incompany contribution of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a forzign DNA segment of the gene has been replaced by a segment of a forzign DNA sequence which encodes a forzign epitope or antigen. Also described are:

(I) use of thin aggregative finbriae (SEP1/7AF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Encoderationed for the production of fimbriae comprising recombinant of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of copy of that gene; and (4) eliciting an immune response in an animal. Copy of that gene; and (4) eliciting an immune response in an animal, or protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a salmonella, E. coli or acid sequence or sequences grown on a salmonella, E. coli or acid sequence or sequences grown on a salmonella, E. coli or acid sequence or sequences grown on a salmonella, E. coli or acid sequence or sequences grown on a salmonella, E. coli or acid sequence or sequences grown on a salmonella, E. coli or acid sequence or sequences grown on a salmonella, E. coli or acid sequence or sequences grown on a salmonella, E. coli or acid sequence or sequences grown and grown and grown and grown and grown and grown and grown and grown and grown and grown and grown and grown and grown and grown and grown and grown and grown and grown and grown and grown a
                                           Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 MKLLKVAAFAAIVVSGSALAGVVPQWGGGGNHNGGGNSSGPDSTLSIYQYGSANAALALQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        à
                                                                                                                                                                                                                                                                    The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative finbriae (SEPI/TAP) nucleation depended assembly system of strains of Salmonella Escherichia coli and Enterchacteriacae for the production of fimbriae comprising recombinant of Enterchacteriaes and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologue species; (3) directing recombination of a recombinant gene back into the chromosome of the homologue species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or useful for the expression of recombinant AgfA protein which is useful for useful for the expression of recombinant for an efficient live vaccine, the carrier fimbrial subunit protein sare usually strong immunogens, which may be important for directing an immune response in against the innested epitope, and hybrid fimbriae are usually strong immunogens, which may be important for directing an immune response in expensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                           Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

```

The invention relates to an isolated peptide capable of binding a mammal selected from sequences shown in ABRR2642. ABRR2648-49. The peptide or antibody is useful for treating a hedicamal infection in a human or animal or in the manufacture of a medicament for the prophylactic treatment of a bacterial infection, such as Escherichia coli, Salmonella or Shigalla infection. The peptide that is immobilized on a solid support is also useful as a reagent for determining the ability of a plasma protein to bind to bacteria. The present sequence represents an E. coli

Sequence 151 AA;

15 kDa protein

New isolated peptide capable of binding a mammalian plasma protein, useful in the manufacture of a medicament for the prevention and/or treatment of a bacterial infection, such as Escherichia coli, Salmonella or Shigella infections.

A; Description: major component of wild-type curli; interaction between CsgA and CsgB tri
A;Note: curli are thin, coiled fibers expressed on the surface of Escherichia coli that
and H-kininogen; in the absence of CsgA, CsgB can self-assemble into polymers
F;1-20/Domain: signal sequence #status predicted <SIG>
